Introduction to Philosophy (PHIL)
CTY Course Syllabus

Course Description
Is there a real world, or is everything a figment of my imagination? Do we have free will, or do our brains simply respond mechanically to stimuli? What, if anything, distinguishes right from wrong? Philosophers relentlessly pursue the fundamental questions of life, and their techniques apply to problems in any discipline or endeavor. They establish standards of evidence, provide rational methods of resolving conflicts, and create techniques for evaluating ideas and arguments.

This course is a survey of several major areas of Western analytic philosophy: metaphysics and epistemology, ethics, philosophy of mind, philosophy of language, philosophy of religion, and philosophy of science. Students explore such concepts as the nature of the world and how we have access to knowledge of the world; moral behavior and the nature of good and evil; the relationship between minds and bodies; the relationship between our thoughts and the external world; arguments for and against the existence of God; and how we should employ logical analysis and empirical observations to evaluate arguments. For each topic, students consider positions of historical thinkers such as Plato, Descartes, and Hume, as well as those of contemporary philosophers such as John Rawls and Hilary Putnam. Students reflect upon philosophical issues through debate, discussions, and formal critical essays in order to develop the analytical skills necessary for effectively evaluating arguments and thinking independently.

Learning Outcomes/Competency
The following outcomes are expected of students who complete this course:

Logic
Understand the nature of reasoning; articulate his/her thoughts in a logical and clear fashion; recognize fallacies; construct good arguments; evaluate deductive arguments; evaluate inductive arguments.

Ethics
Express reasons in support of a moral claim; understand that there are better and worse reasons for making a moral decision; explain the difference between an act being morally permissible and being morally necessary.

Metaphysics: Personal Identity
Recognize the complexity of our criteria for personal identity and consider the possibility that our commonsense beliefs about the self may be mistaken.
**Metaphysics: Mind-Body Problem**
Understand and explain the central problems concerning the conception of mind; write clearly about the different theories concerning the relationship between the mind and the body.

**Epistemology**
Be more aware of their own intuitions about knowledge; understand the major philosophical approaches to epistemology; understand the complexity of how humans interact with knowledge.

**Philosophy of Religion**
Understand and explain clearly the theistic conception of God; explain the different arguments for the existence of God; explain the problem of evil for theistic belief; and understand the complexity of evaluating justified religious belief.
